

SREEHARI PAVITHRAN

Data Analyst | SQL • Python • Tableau • Data Quality & Governance

sreehari.pavithran10@gmail.com | +91-6282709650 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data Analyst with 3.8+ years across US banking (Axos Bank & Axos Clearing) and Consumer Durables & Building Products (Fortune Brands Innovations) engagements. Currently a Data Analyst on the Data Governance Certification function for an enterprise Snowflake/DataVault 2.0 platform — scoring models for data quality and business relevance, identifying/masking PII, and automating certification with Snowflake Streamlit and Python. Skilled in SQL (advanced joins, window functions, CTEs), Python, and Tableau, with a proven record of improving reporting accuracy and enabling compliance-ready analytics for enterprise stakeholders. Pursuing an MBA in Business Analytics (MAHE) alongside full-time work.

CORE SKILLS

Data Analysis & Visualization: SQL (Advanced Joins, Window Functions, CTEs), Python (Pandas, NumPy, Matplotlib, Seaborn), Tableau, Microsoft Excel

Databases & Data Platforms: Snowflake, Snowflake Streamlit, Dbt, MS SQL Server (SSMS, SSRS), MySQL, T-SQL, Azure Data Studio

Data Quality & Governance: DataVault 2.0, Data Product Certification, Source-to-Target Validation, UAT & Certification Testing, Data Reconciliation, KPI/Metric Validation, PII Identification & Masking

Tools & Methods: Jira, Git/GitHub, Jupyter Notebook, VS Code, Agile/Scrum, Selenium

PROFESSIONAL EXPERIENCE

Data Radian Technologies Pvt Ltd — Client: [Fortune Brands Innovations](#), USA *India (Remote)*

Data Analyst – Governance | Certification Lead *Apr 2025 – Present*

- Collaborated with BI Engineers to migrate legacy, source-fed Tableau dashboards (Connected Product, Finance, Sales & Revenue, Supply Chain) onto a governed Data Vault 2.0 reporting model, replicating dashboard logic and KPIs against new Business Vault/Info Mart objects to ensure metric parity and a clean, defect-free cutover.
- Performed comprehensive Tableau dashboard testing — data source validation, extract refresh checks, KPI/aggregation calculations, and filter/parameter testing — reconciling outputs against Business Vault and Info Mart data through row-level comparison.
- Built SQL-based data validation frameworks and Tableau reconciliation dashboards comparing legacy systems against Business Vault/Info Mart outputs, accelerating discrepancy detection during the Data Vault 2.0 migration.
- Performed end-to-end SQL validation across Source, Raw Vault, Business Vault, Info Mart, and Tableau layers, executing source-to-target reconciliation and transformation verification through to final certification.
- Optimized SQL-based validation queries and automated certification scoring and workflows using Snowflake, Python, and Snowflake Streamlit — cutting manual review effort and accelerating certification turnaround.
- Lead the Data Product Certification function within the Governance team, certifying Business Vault and Info Mart objects on a multi-dimensional scoring framework — data consistency, validity, completeness, business relevance, and KPI field integrity.
- Identify PII fields across Business Vault and Info Mart models and enforce masking controls as part of the certification process, strengthening data privacy and regulatory compliance.
- Logged defects with SQL evidence in Jira and PR reviews, and partnered with data modelers, architects, BI/Data Engineering, QA, and stakeholders across Product, Finance, Commercial, and Supply Chain to remediate quality gaps — resolving over 90% of issues pre-certification while maintaining >95% compliance with naming and modeling standards.

Quinte Financial Technologies, Inc. — Client: [Axos Bank](#) & [Axos Clearing](#), USA *Chennai, India (On-site)*

Senior Data Analyst | Team Lead *Aug 2024 – Apr 2025*

- Led a small team of analysts and served as the primary stakeholder point of contact for Axos Bank & Axos Clearing Governance, Risk & Compliance (BSA/AML) reporting, lifting compliance audit scores by 15% and cutting compliance breaches by 30%.
- Partnered with Enterprise Data Warehouse and Data Engineering teams to strengthen ETL pipelines, optimizing SQL Server stored procedures and Python scripts to accelerate data availability for risk analytics and regulatory reporting.

Data Analyst | Team Lead (from Jun 2023) *Nov 2022 – Aug 2024*

- Built a Tableau-based Transition Matrix enabling ERM teams to review at-risk customers in bulk instead of individually, cutting review time by over 60% and improving data-capture accuracy from 60% to 85%.
- Conducted UAT (Python, SQL, DBT) and built data validation frameworks and reconciliation dashboards comparing source vs. pre-production environments to detect discrepancies and ensure data integrity across pipelines.
- Automated Python-based extraction of SQL logic across multiple Tableau workbooks (+80% retrieval efficiency) and engineered Selenium-based automation for Axos Clearing operational data extraction, removing manual effort from compliance monitoring.

EDUCATION & CERTIFICATION

MBA in Business Analytics — MAHE, Online (UGC-Entitled, NAAC A++) *In Progress – Expected Oct 2027*

PG Diploma in Data and Business Analytics — Mahatma Gandhi University *2021 – 2022*

B.Sc. Physics — Deva Matha College (affiliated to Mahatma Gandhi University) *2017 – 2020*

Data Science Internship — [DEVTOWN](#) *May 2022 – Oct 2022*
